The “Fed” consists of three main entities:

- **Board of Governors**: 7 members appointed by U.S. President
- **Federal Reserve Banks**: 12 total; semi-independent by design
- **Federal Open Market Committee**: 19 members; 12 voting

Primary responsibility areas:

- Monetary policy
- Bank regulation
- Financial services
The Federal Reserve’s Role in Monetary Policy

• Dual Mandate from U.S. Congress:
  1) Maximum employment
  2) Price stability

• Federal Open Market Committee (FOMC):

FOMC: “In light of...global developments...muted inflation...the [FOMC] decided to lower the...federal funds rate.”
From July 31, 2019 FOMC Statement

“In light of the implications of global developments for the economic outlook as well as muted inflation pressures, the Committee decided to lower the target range for the federal funds rate to 2 to 2-1/4 percent. This action supports the Committee's view that sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective are the most likely outcomes, but uncertainties about this outlook remain. As the Committee contemplates the future path of the target range for the federal funds rate, it will continue to monitor the implications of incoming information for the economic outlook and will act as appropriate to sustain the expansion, with a strong labor market and inflation near its symmetric 2 percent objective…

“Voting against the action were Esther L. George and Eric S. Rosengren, who preferred at this meeting to maintain the target range for the federal funds rate at 2-1/4 to 2-1/2 percent.”

August 2, 2019 Statement by Esther George

“I dissented with the decision to lower the target range for the federal funds rate. In my view, incoming economic data and the outlook for economic activity over the medium term warranted no change in the policy rate. The moderation of economic growth in 2019 is in line with my outlook that calls for a gradual decline to a trend level over the medium term. With moderate growth, record low unemployment, and a benign inflation outlook, maintaining the Committee’s policy settings at 2.25-2.5 percent would have been appropriate, in my view. There are certainly risks to the outlook as the economy faces the crosscurrents emanating from trade policy uncertainty and weaker global activity. Should incoming data point to a weakening economy, I would be prepared to adjust policy consistent with the Federal Reserve’s mandates for maximum sustainable employment and stable prices.”

Indeed, new claims for unemployment insurance in Oklahoma have recently returned to 2015-2016 levels.
The slower state job growth has been driven mainly by job losses in energy and manufacturing.

Job Growth by Industry
June 2019

Sources: U.S. Bureau of Labor Statistics/Haver Analytics
Oklahoma’s rig count has dropped this year, and regional energy firms expect further slowing ahead.
Volatile and marginally profitable oil prices, and low natural gas prices have contributed to slower activity.

Summary

- The national economy continues to grow, with low unemployment, but business investment has slowed.

- The Fed lowered its target for the federal funds rate by 25 basis points on July 31, with two FOMC members dissenting.

- Oklahoma and Panhandle job growth has slowed in 2019 with lower commodity prices, but unemployment remains very low.

- A longer-term trend worth watching is the state’s switch in net domestic migration flows in recent years, as more highly educated Oklahomans have been moving out.
