Review of the State of Agriculture

Cortney Cowley

Rural Lending Forum: Financing Women and Minority Farmers – August 18, 2021

The views expressed here are those of the speaker and do not necessarily reflect the opinions of the Federal Reserve Bank of Kansas City or the Federal Reserve System.
Ag Outlook Themes

• The outlook for the agricultural economy in the United States and in Kansas remains solid, despite some slight declines in commodity prices recently.

• Agricultural credit conditions remain strong and have been supported by high commodity prices and carryover from government programs.
Ag banker anecdotes show continued concerns related to loan demand, input costs, and drought.

- The rising costs of many products that farmers utilize are of major concern, from fertilizer to latex gloves. – Wisconsin
- Lack of supply has pushed expenses higher. Lack of availability of equipment will slow capital spending. – Kansas
- This region will experience a tough year in agriculture due to drought conditions. – Colorado, Wyoming, and North Dakota
- Severe drought conditions forcing the sale of breeding stock at a current lower rate. – Montana
Agriculture is an important industry in Kansas, as well as in other states in the Kansas City Fed District and Midwest.

Concluding Thoughts

• The state of the agricultural sector remains strong.
  • The cattle industry remains the one key area of concern, particularly in areas where production costs are high and water is scarce.
• Risks to the outlook for farm finances include drought in the West and Northern Plains and higher costs of production.
• Education and information are crucial for farmer success and the future of farming.
• Moving forward, access to credit will also be important for the advancement of women, BIPOC, young, beginning, and veteran farmers.
Thank you!
