

LMCI suggest the level of activity increased modestly and momentum was little changed in September

October 09, 2019

LMCI suggest the level of activity increased modestly and momentum was little changed in September.

The Kansas City Fed Labor Market Conditions Indicators (LMCI) suggest the level of activity increased modestly and momentum was little changed in September. The level of activity increased modestly in September from 1.02 to 1.06, while the momentum indicator was little changed at 0.55.

The table in the current release shows the five labor market variables that made the largest contributions to the increase in the activity indicator over the last six months and the five variables that made the largest positive contributions to the momentum indicator in September 2019. The activity indicator increased 0.18 over the last six months. The largest contributor to the increase in the level of activity was job leavers. Fourteen variables made a positive contribution, and 10 variables made a negative contribution. The momentum indicator was 0.55 in September, where the largest contributor to momentum was initial claims. Twelve variables made a positive contribution, and 12 variables made a negative contribution.
