

Consumer Credit Report Missouri

3rd QUARTER 2014

FEDERAL RESERVE BANK of KANSAS CITY

Summary

Average consumer debt in Missouri increased by \$70 to \$15,347 in the third quarter (Chart 1). Consumer debt, while up 7.2 percent from the second quarter of 2012, remains below District and national levels (Chart 2). Revolving debt was flat, but has fallen dramatically from its peak in the depths of the recession. Upticks in average consumer debt in recent quarters and the substantial decline in revolving debt imply installment debt, made up largely of student loans and auto loans, has increased fairly rapidly.

The delinquency rate for any account loans in Missouri was 4.7 percent, changing little from the second quarter (Chart 3). While the delinquency rate was significantly lower than the national rate, the difference was largely a function of mortgage delinquency rates. The personal bankruptcy filing rate fell, while remaining moderately higher than the U.S. rate, which also fell. The past-due mortgage rate increased significantly in the third quarter, to 7.3 percent from 7.0 percent in the first quarter (Chart 4). Mortgage delinquency rates were especially high in St. Joseph and St. Louis, as well as in counties in far southeastern Missouri (Map).

In This Issue: Developments in the Automobile Credit Market

The rise in automobile sales following the recession has led to a rise in auto debt, as 73 percent of U.S. auto sales are financed. Average outstanding balance has also increased in both Missouri and the U.S. (Chart 5). While auto loan balances have increased, delinquencies have declined. Finance company debt is much more likely to be delinquent than bank debt, with third quarter rates at 13.5 percent and 3.3 percent, respectively, in Missouri (Chart 6).

Chart 1: Average Debt Per Consumer

Source: Federal Reserve Bank of New York Consumer Credit Panel/Equifax.
Notes: Excludes first mortgage. A first mortgage represents the primary note on the home and typically is not used to purchase consumer goods.

Chart 2: Average Debt Per Consumer

Notes: Excludes first mortgage. A first mortgage represents the primary note on the home and typically is not used to purchase consumer goods.

Chart 3: Average Consumer Delinquency Rates

*"Any Account" includes accounts not otherwise reported in the chart, such as first mortgages.

Sources: Federal Reserve Bank of New York Consumer Credit Panel/Equifax; the Administrative Office of the U.S. Courts.

Notes: At least 30 days past due. Beginning in the first quarter, "severe derogatory" accounts are included in the calculation of delinquency rates, which makes delinquency rates higher than in other quarters, all else being equal. Thus, these delinquency rates are not comparable to delinquency rates provided in reports prior to 2014. Severe derogatory debt has been charged off by the lender (not through bankruptcy) but is still owed by the borrower.

Chart 4: Mortgage Delinquencies

Source: Lender Processing Services Inc.

Notes: "Past due" represents mortgages that are 30 days or more delinquent, including those in foreclosure. "Seriously delinquent" represents mortgages that are 90 days or more past due or in foreclosure.
