## **Potential Impacts**

- Financial
- Operational
- Legal
- Reputational

# Cybersecurity FFIEC Regulatory Guidance Recent Notifications

# Regulatory Guidance Cybersecurity of Interbank Messaging and Wholesale Payment Networks

## **BACKGROUND**

- Recent cyber attacks against interbank networks and wholesale payment systems to commit fraud have demonstrated capability to:
- Compromise a financial institution's wholesale payment origination environment, bypassing information security controls
- Obtain and use valid operator credentials with the authority to create, approve, and submit messages
- Employ sophisticated understanding of funds transfer operations and operational controls
- Use highly customized malware to disable security logging and reporting, as well as other operational controls to conceal and delay detection of fraudulent transactions
- Transfer stolen funds across multiple jurisdictions quickly to avoid recovery

## **RISKS**

- Unauthorized transactions involving interbank messaging and wholesale payment networks may subject the originating bank to financial loss and compliance risk

Telecommunication

# Regulatory Guidance Cyber Attacks Involving Extortion/Ransomware

## **BACKGROUND**

- Cyber criminals and activists use a variety of tactics, such as ransomware, denial of service (DoS), and theft of sensitive business and customer information to extort payment or other concessions from victims
- In some cases, these attacks have caused significant impacts on businesses' access to data and ability to provide services
- Other businesses have incurred serious damage through the release of sensitive information

## **RISKS**

- Financial institutions face a variety of risks from cyber attacks involving extortion, including liquidity, capital, operational, compliance and reputation risks, resulting from fraud, data loss, and disruption of customer service

# Regulatory Guidance Ransomware

**CryptoLocker**

## Your personal files are encrypted!

Your important files **encryption** produced on this computer: photos, videos, documents, etc. [Here](#) is a complete list of encrypted files, and you can personally verify this.

Encryption was produced using a **unique** public key **RSA-2048** generated for this computer. To decrypt files you need to obtain the **private key**.

The **single copy** of the private key, which will allow you to decrypt the files, located on a secret server on the Internet; the server will **destroy** the key after a time specified in this window. After that, **nobody and never will be able** to restore files...

To **obtain** the private key for this computer, which will automatically decrypt files, you need to pay **300 USD / 300 EUR / similar amount in another currency**.

Click «Next» to select the method of payment and the currency.

**Any attempt to remove or damage this software will lead to the immediate destruction of the private key by server.**

Private key will be destroyed on  
9/20/2013  
5:54 PM

Time left  
**71 : 59 : 52**

# Regulatory Guidance Destructive Malware

## **BACKGROUND**

- Over the past two years, cyber attacks on businesses have increased in frequency and severity
- In some cases, destructive malware used in these attacks successfully compromised large quantities of data and rendered supporting systems inoperable
- Malware can be introduced into systems through a variety of mechanisms, including through employees downloading attachments in phishing or spear-phishing emails, connecting external devices (e.g., USB drives), or visiting compromised Web sites, or through unauthorized parties using stolen employee or third-party credentials to install malware directly on systems
- Once introduced, destructive malware may be further distributed through compromised enterprise system management technologies

## **RISKS**

- Financial institutions face a variety of risks from cyber attacks involving destructive malware, including liquidity, capital, operational, and reputation risks, due to such events as fraud, data loss, and disruption of customer service

# Data Breaches

# Regulatory Guidance Risk Mitigation Practices

- Securely configure systems and services
- Review, update, and test incident response and business continuity plans
- Conduct ongoing information security risk assessments
- Perform security monitoring, prevention, and risk mitigation
- Protect against unauthorized access
- Implement and test controls around critical systems regularly
- Enhance information security awareness and training programs
- Participate in industry information-sharing forums

## FFIEC Cybersecurity Assessment Tool

### **Overview for Chief Executive Officers and Boards of Directors**

In light of the increasing volume and sophistication of cyber threats, the Federal Financial Institutions Examination Council (FFIEC) developed the Cybersecurity Assessment Tool (Assessment), on behalf of its members, to help institutions identify their risks and determine their cybersecurity preparedness. *The Assessment provides a repeatable and measurable process for institutions to measure their cybersecurity preparedness over time.* The Assessment incorporates cybersecurity-related principles from the *FFIEC Information Technology (IT) Examination Handbook* and regulatory guidance, and concepts from other industry standards, including the National Institute of Standards and Technology (NIST) Cybersecurity Framework.

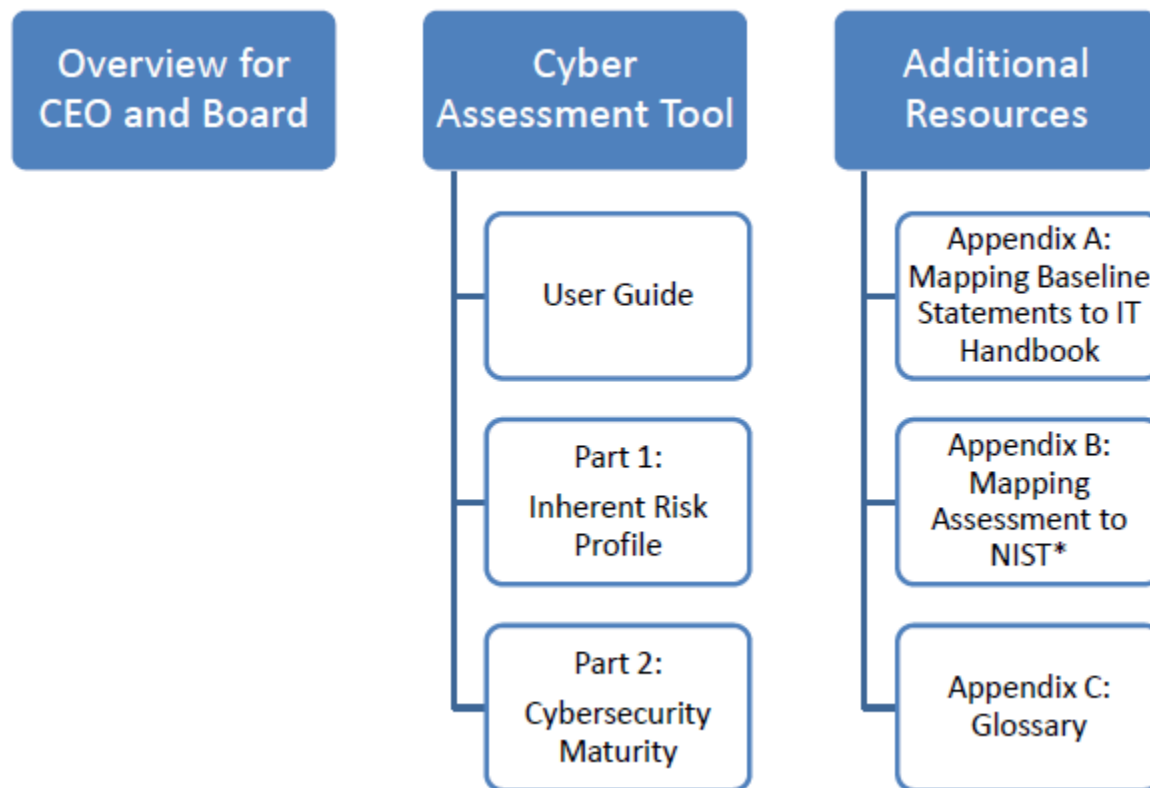

# CAT Parts and Process

The Assessment consists of 3 major components:

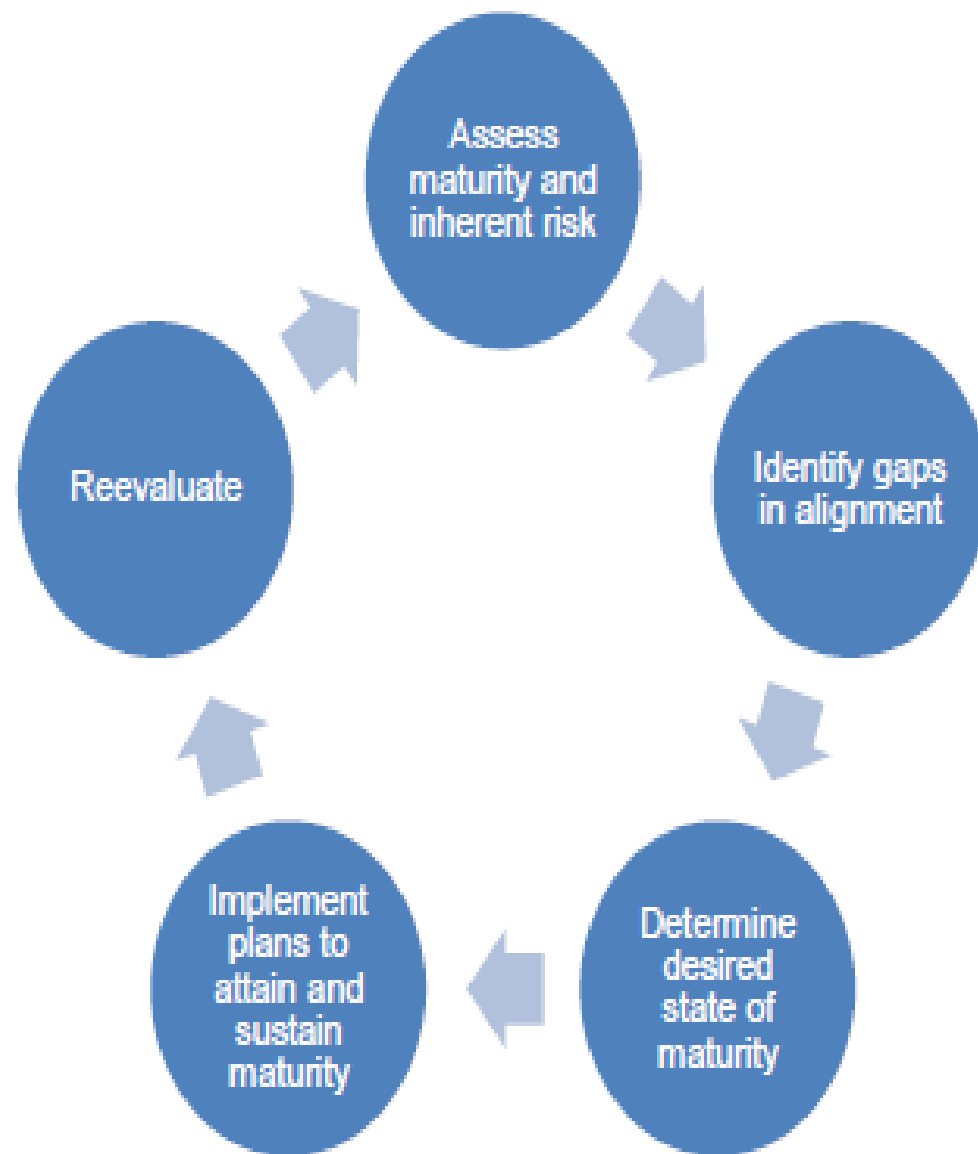

1. **Inherent Risk Profile-** rating your inherent risk for cybersecurity threats based on your size and complexity
2. **Cybersecurity Maturity-** regarding how prepared you are to handle different cybersecurity threats
3. **Interpreting and analyzing your results by understanding how your inherent risk ties to your cybersecurity maturity, and where you should be regarding risk vs. maturity**

# Assessment Tool Components

# CAT Tool Steps

1. Complete Part One: Inherent Risk Profile
2. Complete Part Two: Cybersecurity Maturity Assessment
3. Determine appropriate target maturity level
4. Identify any gaps between current and desired states
5. Develop implementation plans based on identified gaps

# Cybersecurity Assessment Tool Risk Matrix

		Inherent Risk Levels				
		Least	Minimal	Moderate	Significant	Most
Cybersecurity Maturity Level for Each Domain	Innovative					
	Advanced					
	Intermediate					
	Evolving					
	Baseline					

# InTReX

## Information Technology Risk Examination Program

# InTREx

- The FRB, FDIC and CSBS updated information technology and operations risk (IT) examination procedures to provide a more efficient, risk-focused approach
- This enhanced program also provides a cybersecurity preparedness assessment and discloses more detailed examination results
- The InTREx Program is an enhanced, risk-based approach for conducting IT examinations
- The Program helps to ensure that financial institution management promptly identifies and effectively addresses IT and cybersecurity risks

# InTREx Program

IT  
Profile

Work Programs

Audit  
Management

Development &  
Acquisition  
Support &  
Delivery

## InTREx (cont'd)

- The Core Modules incorporate procedures to assess compliance with Appendix B to Part 364 of the FDIC Rules and Regulations entitled *Interagency Guidelines Establishing Information Security Standards* as well as procedures to assess cybersecurity preparedness
- The results of these assessments will be embedded in the Report of Examination

## InTREx (cont'd)

- The complete InTREx program is available through the FDIC's website:
- Financial Institution Letter
  - **FIL-43-2016**
  - **June 30, 2016**

# Cybersecurity Exam Expectations

- All firms must complete a comprehensive cybersecurity risk assessment
  - Use of the CAT is not required
- All firms must comply with the baseline expectations of the FFIEC IT Handbooks
  - Outlined within Appendix A of the CAT

## Cybersecurity Governance Expectations

Expectation	Governance
Risk Assessment	Review at least annually Approve and support plans to address gaps
Compliance with Baseline Expectations	Review at least annually Support management in maintaining full compliance with baseline expectations and achieving higher levels of risk management, as needed
Incident Response Planning	Review as needed Ensure plans are comprehensive, realistic, and tested
Training of Staff	Review reporting of training at least annually Support comprehensive training, including social engineering prevention strategies
Testing/Patch Management	Review results of tests and audits as conducted Ensure issues are fully addressed in a timely manner Ensure patches are current
Information Sharing	Review as needed Stay aware of trends and risks in cybersecurity

# Common IT Examination Findings

# Common IT Exam Findings

- **Control Weaknesses**
  - Overly broad access levels
  - Excessively high wire transfer approval limits
  - User access rights are not roles based
  - Too many network administrators
  - Failure to terminate user rights upon separation
- **Data/Asset Management**
  - Exclusion of some assets in risk assessments
  - Not diagramming networks
  - Failure to patch software in a timely manner
  - Lack of internal network scans

# Common IT Exam Findings (cont'd)

- **IT Governance**
  - Failure to comprehensively report to board
  - Wire/ACH limits are not reviewed/approved by board
  
- **Information Security**
  - Need for comprehensive GLBA reporting
  - Failure to properly control/manage PII leaving the bank
  - Need to complete social engineering testing/training

# Payments Fraud and Lessons Learned

# Payments Fraud

- ❖ Payments fraud is on the rise
  - ❖ Law enforcement agencies are all reporting a significant increase in funds transfer fraud
  - ❖ Online banking credentials of small/medium sized businesses are being exploited
- ❖ Wire fraud incidents are prevalent across the region
- ❖ Account take over example
- ❖ Bank system malware example

# Payments Fraud (Cont'd)

## ❖ **Fraud lessons learned**

- ❖ **Ensure your organization has:**
  - ❖ Strong controls
  - ❖ Effective policies/procedures
  - ❖ Appropriate risk limits
  - ❖ Policies consistently followed
  - ❖ Strong exception approval process
  - ❖ Social engineering training
  - ❖ Social engineering testing
  - ❖ Testing/auditing of staff's adherence to policies

# Resources

# Threat Intelligence Information Sources

## **Government and Institutional Resources**

- Federal Bureau of Investigation (FBI)  
Infragard
- United States Secret Service (USSS)  
Electronic Crimes Task Force
- Department of Homeland Security (DHS)

## Cybersecurity Awareness

The Federal Financial Institutions Examination Council (FFIEC) members are taking a number of initiatives to raise the awareness of financial institutions and their critical third-party service providers with respect to cybersecurity risks and the need to identify, assess, and mitigate these risks in light of the increasing volume and sophistication of cyber threats.

Financial institutions are increasingly dependent on information technology and telecommunications to deliver services to consumers and business every day. Disruption, degradation, or unauthorized alteration of information and systems that support these services can affect operations, institutions, and their core processes, and undermine confidence in the nation's financial services sector.

In June 2013, the FFIEC announced the creation of the Cybersecurity and Critical Infrastructure
